PATENT

Attorney Reference Number 6047-53173-01
Application Number 09/590,795

Claims

1. (currently amended) A method of forming an enhanced-surface-area electrically conductive structure, the method comprising:
 - providing a layer containing ruthenium oxide;
 - converting at least a portion of the ruthenium oxide in the layer to ruthenium so as to produce a ruthenium-containing layer having a rough surface; and
 - annealing the rough-surfaced ruthenium layer in an oxidizing ambient to form passivated ruthenium in an outer portion of the rough-surfaced ruthenium layer.
2. (original) The method of claim 1 wherein the act of converting comprises heating the layer.
3. (original) The method of claim 1 wherein the act of converting comprises exposing the layer to a reducing ambient.
4. (original) The method of claim 1 wherein the act of converting comprises exposing the layer to a reduced-pressure environment.
5. (original) The method of claim 1 wherein the step of converting comprises converting at least a portion of the ruthenium oxide in the layer to ruthenium so as to produce a layer having a textured surface with a mean feature size of at least about 100 Angstroms.
6. (currently amended) A method of forming an enhanced-surface-area electrically conductive structure, the method comprising:
 - providing a layer containing ruthenium oxide;
 - converting at least a portion of the ruthenium oxide to ruthenium by heating the layer in a reduced-pressure environment with a pressure of about 75 torr or less so as to produce a layer having a rough surface; and
 - annealing the portion of ruthenium oxide that is converted to ruthenium in an oxidizing ambient to form a passivated ruthenium portion.

7. (original) The method of claim 6 wherein the step of converting is performed in a reduced-pressure environment with a pressure of about 20 torr or less.
8. (original) The method of claim 6 wherein the step of converting is performed in a reduced-pressure environment with a pressure of about 5 torr or less.
9. (currently amended) A method of forming an enhanced-surface-area electrically conductive structure, the method comprising:
providing a layer containing ruthenium oxide;
converting at least a portion of the ruthenium oxide to ruthenium by heating the layer to at least about 500°C in a reduced-pressure environment with a pressure of about 75 torr or less for a sufficient time so as to produce a layer having a rough surface; and
annealing the portion of ruthenium oxide that is converted to ruthenium in an oxidizing ambient to form a passivated ruthenium portion.
10. (original) The method of claim 9 wherein the act of converting is performed by heating the layer to at least about 750°C.
11. (original) The method of claim 9 wherein the act of converting is performed by heating the layer to at least about 800°C.
12. (original) The method of claim 9 wherein the act of converting is performed by heating the layer to at least about 500°C for at least about 2 minutes.
13. (original) The method of claim 9 wherein the act of converting is performed by heating the layer to at least about 500°C for a time in the range of about 2 to about 20 minutes.
14. (currently amended) A method of forming an enhanced-surface-area electrically conductive structure, the method comprising:
providing a layer containing ruthenium oxide; ~~and~~
converting the ruthenium oxide in the layer to ruthenium so as to produce a ruthenium-containing layer having a rough surface; and

AJV:kza 07/12/05 389390.doc 97-1228.00/US
PATENT

Attorney Reference Number 6047-53173-01
Application Number 09/590,795

annealing the rough-surfaced ruthenium-containing layer in an oxidizing ambient to form a passivated ruthenium portion.

15. (currently amended) A method of forming an enhanced-surface-area electrically conductive structure, the method comprising:

providing a layer containing ruthenium oxide;

converting some ruthenium oxide in the layer to ruthenium so as to produce a ruthenium-containing layer having a rough surface with a mean feature size of at least about 100

Angstroms; and

~~exposing the layer having a rough surface to a ambient suitable to~~ an oxidizing ambient
~~decrease the tendency of the layer to react with surrounding material.~~

16-18. (canceled)

19. (currently amended) The method of claim 15 wherein the act of exposing comprises exposing the layer having a rough surface ~~first~~ to a nitrogen-supplying reducing ambient and then to an the oxidizing ambient.

20. (currently amended) A method of forming an enhanced-surface-area electrically conductive structure, the method comprising:

providing a layer containing ruthenium oxide; and

converting some ruthenium oxide in the layer to ruthenium by heating the layer in a reduced-pressure environment in a non-oxidizing ambient so as to produce a ruthenium-containing layer having a rough surface with a mean feature size of at least about 100

Angstroms.

21. (original) The method of claim 20 wherein the act of converting is performed in a nitrogen ambient.

22. (original) The method of claim 20 wherein the act of converting is performed in a reducing ambient.

Application Number 09/590,795

23. (original) The method of claim 20 wherein the act of converting is performed in a nitrogen-supplying reducing ambient.
24. (original) The method of claim 20 wherein the act of converting is performed in an ammonia-containing ambient.
25. (original) The method of claim 20, wherein the act of converting is performed in a hydrogen-containing ambient.
26. (original) The method of claim 20, wherein the art of converting is performed in a helium-containing ambient.
27. (original) The method of claim 20, wherein the art of converting is performed in a neon-containing ambient.
28. (original) The method of claim 20, wherein the art of converting is performed in an argon-containing ambient.
29. (original) The method of claim 20 further comprising exposing the layer having a rough surface to an oxidizing ambient.
30. (currently amended) A method of forming an enhanced-surface-area electrically conductive layer, the method comprising:
providing a layer containing ruthenium oxide;
selecting anneal conditions adapted to convert at least a portion of the ruthenium oxide to ruthenium; and
annealing the layer under said conditions so as to produce a layer having a rough surface;
and
passivating the annealed layer by exposing the annealed layer to an oxidizing ambient.
31. (currently amended) A method of forming a ruthenium-containing enhanced-surface-area electrically conductive layer, the method comprising:

AJV:kaa 07/12/05 389390.doc 97-1228.00/US
PATENT

Attorney Reference Number 6047-53173-01
Application Number 09/590,795

depositing a continuous layer consisting essentially of ruthenium oxide onto a supporting structure; and

annealing the layer in reduced pressure environment in a non-oxidizing ambient so as to substantially convert the ruthenium oxide to ruthenium, leaving a discontinuous roughened layer consisting essentially of ruthenium on the supporting structure.

32. (original) A method of forming an enhanced-surface-area electrically conductive layer, the method comprising:

- forming a layer of conducting material;
- forming a layer comprising ruthenium oxide on the layer of conducting material; and
- annealing the layer comprising ruthenium oxide so as to convert at least some of the ruthenium oxide to ruthenium so as to produce a layer having a textured surface with a mean feature size of about 100 Angstroms or more.

33. (original) A method of forming an enhanced-surface-area electrically conductive layer, the method comprising:

- providing a layer comprising ruthenium oxide;
- annealing the layer comprising ruthenium oxide so as to convert at least some of the ruthenium oxide to ruthenium so as to produce a resulting layer having a textured surface with a mean feature size of about 100 Angstroms or more; and
- forming a layer of electrically conductive material conformally over the resulting layer such that the surface of the conductive material away from the resulting layer has a textured surface generally corresponding to that of the resulting layer.

34. (currently amended) A method of forming a capacitor, the method comprising:

- providing a continuous layer containing ruthenium oxide;
- converting least some of the ruthenium oxide to ruthenium so as to produce a resulting discontinuous layer having a rough surface;
- forming a layer of dielectric material over the resulting layer; and
- forming a layer of conductive material over the layer of dielectric material.

PATENT

Attorney Reference Number 6047-53173-01
Application Number 09/590,795

35. (original) The method of claim 34 wherein the act of forming a layer of dielectric material comprises forming a layer of high-dielectric-constant dielectric material.
36. (original) The method of claim 34, wherein at least some of the ruthenium oxide is converted to ruthenium by annealing the layer at a pressure of 75 torr or less.
37. (original) The method of claim 34, further comprising processing the layer containing ruthenium oxide to define a first electrode.
38. (original) The method of claim 37, wherein the first electrode is defined by an etching process.
39. (original) The method of claim 37, wherein the first electrode is defined by a chemical-mechanical polishing process.
40. (original) The method of claim 37, wherein the first electrode is defined prior to converting at least some of the ruthenium oxide to ruthenium.
41. (original) A method of forming a capacitor, the method comprising:
providing a first layer of electrically conductive material;
forming a layer containing ruthenium oxide on the layer of electrically conductive material;
annealing the layer containing ruthenium oxide so as to convert at least some of the ruthenium oxide to ruthenium and so as to produce a rough resulting surface with a mean grain size of at least about 100 Angstroms;
forming a layer of dielectric material over the layer having a rough surface; and
forming a second layer of conductive material over the layer of dielectric material.
42. (original) The method of claim 41 wherein the act of forming a layer of dielectric material comprises forming a layer of high-dielectric-constant dielectric material.
- 43 - 65. (canceled)

Application Number 09/590,795

66. (original) A method of forming an array of capacitors, the method comprising:
providing a layer containing ruthenium oxide;
converting at least some of the ruthenium oxide to ruthenium so as to produce a resulting
layer having a rough surface;
forming a layer of dielectric material over the resulting layer;
forming a conductive layer on the layer of dielectric material; and
defining an array of electrodes by patterning at least one of the ruthenium oxide layer or
the resulting layer.

67. (original) The method of claim 66, wherein the array of electrodes is defined prior
to forming the layer of dielectric material.

68. (original) The method of claim 66, wherein the array of electrodes is defined after
forming the conductive layer on the dielectric layer.

69. (currently amended) The method of ~~claim 65~~ claim 66, wherein the array of
electrodes is defined by etching.

70. (currently amended) The method of ~~claim 65~~ claim 66, wherein the array of
electrodes is defined by chemical-mechanical polishing.

71 -73. (canceled)
